Your Partner for Health

Have you adjusted
your compliance compass?

Barrier reefs ahead

The healthcare industry currently faces compliance requirements which are increasing in complexity. U.S. and European regulators continue to issue in depth rules which define the relationship between healthcare industries, medical practitioners and the scientific societies. These regulations are changing the current business model of scientific societies.

Any society not ready in due time will find it difficult to engage with the health care industry. Regulators will flag such societies' congresses and educational trainings as not compliant – impeding the health care industry to be engaged in such congresses and expel practitioners serious about compliance.

Navigating change compliantly

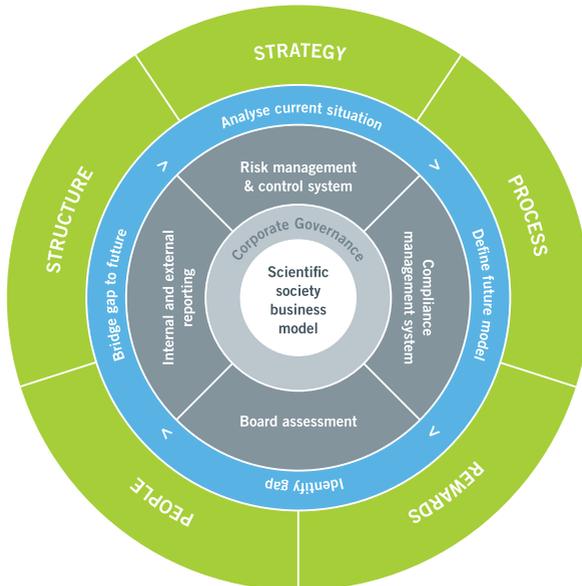

In order to navigate through this complex area, scientific societies with strategic capability are developing a comprehensive corporate governance guidelines, which exceed basic compliance requirements. At their foundation, such societies must align their business model to the new rules. A common challenge for scientific societies will be amongst others the economic risk of organising, financing and executing scientific congresses, sponsored continuous medical education to meet unmet training needs and interaction with their members, e.g. in research and publication. By partnering with AMP, societies can evaluate and minimise risk, ensuring their educational offering is compliant for the future. An appropriate business model with adopted compliance rules will help scientific societies gaining a leading edge over their competitors.

The new compliance rules are an unique opportunity for the scientific societies to position themselves towards the healthcare industry and to gain a competitive advantage over their competitors.

Our value proposition

AMP can help you steer through those waters. We offer comprehensive solutions and tools in order to support you on the way to a sustainable success.

	Yes	No
Do the directors of your scientific society understand the future compliance requirements from the regulators but also from the industries?	<input type="radio"/>	<input type="radio"/>
Do you have an active code of business conduct and policies which you follow carefully when interacting with industry and third parties? E.g. congress regulations, policy on integrated communication, medical education, etc.	<input type="radio"/>	<input type="radio"/>
Have you undertaken a risk assessment for this year? Do you know your highest risk factors?	<input type="radio"/>	<input type="radio"/>
Has your scientific society the necessary competences, skills and information to manage the challenges and to turn them successfully into strategic chances?	<input type="radio"/>	<input type="radio"/>
Is someone in your society responsible to design, assess and monitor your compliance structure, assess its execution and score relevant compliance risks?	<input type="radio"/>	<input type="radio"/>
Are your employees and third party suppliers familiar with the new guidelines and the changing environment?	<input type="radio"/>	<input type="radio"/>
Do you conduct regular internal trainings?	<input type="radio"/>	<input type="radio"/>
